

The future of drug delivery

Ready-to-use preformulated lyophilized liposomes

Liposomes are one of the most common drug delivery carriers for small molecules and nucleic acid therapeutics.

We offer preformulated liposomes with various types of lipids and wide range of zeta potentials and different properties, including:

- Cationic liposomes
- Natural liposomes
- PEGylated liposomes

Upon hydration, these liposomes are ready to use for your drug delivery research needs.

For a complete list of preformulated lyophilized liposomes visit:
